

North Little Rock Curbside Recycling Program

Service Guide

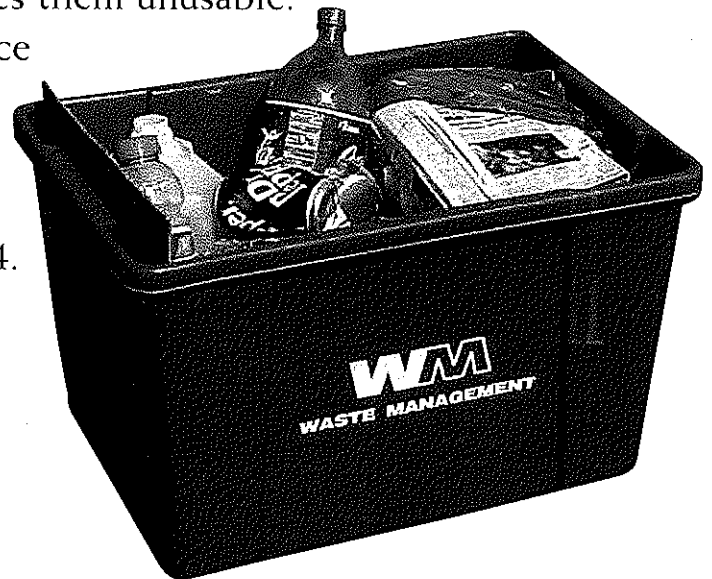

- Please SEPARATE paper products from plastic and aluminum cans by placing paper products in a paper bag and placing in recycling bin.
- Cardboard boxes should be broken down and placed under your bin.
- Contamination of paper products makes them unusable.

Separation of paper products will reduce contamination and keep paper products out of our landfills.

- North Little Rock recycled over 2300 tons or 4,600,000 lbs of material in 2004.
- 69% of residents participated in the recycling program in 2004.
- Through your program, North Little Rock conserved:
 - Over 40,000 trees
 - 9,450,000 kilowatts of electricity
 - 16,135,000 gallons of water
 - prevented 138,300 lbs of air pollution

By producing products out of recycled material as opposed to using raw natural resources

- Recycling is not mandatory. The City encourages recycling as it reduces pollution, extends the life of our landfills, and conserves natural resources.
